Times being what they are, prices and specifications are subject to change without notice.

Constant tension improves any performance.

Merlin ME-128 Tension Servo

Older quadraplex VTR's can be upgraded by fitting the Merlin ME-128 tension servo.

The Merlin tension servo accurately controls tape tension in all operating modes. In record and play, interchangeability is improved. This is especially helpful if multiple copies are being made for distribution. As an additional bonus, tape and head life will be increased. In the shuttle modes, tape is handled smoothly and accurately. This improvement in tape handling is especially noticed when editing.

The ME-128 is supplied as a complete exchange transport. The new transport and electronics are factory assembled and pre-aligned. Installation requires only removal of existing transport, fitting of the new assembly and making a minimum of interconnections to the system control wiring.

The ME-128 uses the standard ME-08 AC-type torque motors. The exchange transport is completely refurbished and upgraded. Steel inserts are fitted at the video head mounting pads to insure accurate, long-term head location and the transport is resurfaced to original specifications.

Older VTR's fitted with the ME-128 tension servo will pull their full weight in any operation!
