Merlin ME-18 AuxPort

The Merlin "AuxPort" (AUXiliary transPORT) is a new concept to double your VTR's flexibility... two transports sharing a single electronic system. With one on the air, you can cue up the next tape on the other, ready to go when the first is finished. (There is a short start-up delay at switch-over—about 4 seconds—so it would be best to bring up a slide, I.D. or spot between tapes.)

The AuxPort duplicates all playback functions of the master VTR. The installation is remarkably simple; three electronic assemblies go in the existing machine and the rest is a matter of cables and connections.

The Merlin AuxPort couples to any Ampex VR-1200, doubling your VTR's flexibility at modest costs with no increase in electronic maintenance.

Add a second VTR for one-third the cost!
