

Merlin ME-248 Relay Control Chassis

Hundreds of Ampex VR-1100 and VR-1200 quad tape machines are still in service — thanks in many cases to quality Merlin refurbishing and replacement parts and assemblies.

The relays in the control chassis of these workhorses by now have seen millions of cycles. Original replacement units are hard to find, more expensive than ever before and every bit as tedious to fit as they were when the machines were new.

Again, Merlin comes to the rescue!

With the Merlin ME-248 Relay Control Chassis . . . a simple, direct plug-in replacement for the Ampex original, but utilizing more modern plug-in type relays which are readily available, inexpensive and reliable.

Keep 'em rolling!
